thinQ

What is thinQ?

## thinQ.io

thinQ is a cloud communications platform that enables you to send and receive voice calls at better rates, with total control, at scale.

Call — SIP / Internet / SIP — Media — Carriers (Twilio, Plivo, Nexmo)

Here's how thinQ's customers gain full visibility into their calls:

- Oh no! Bad call quality or an outage!
- Log into thinQ.io
- Trace the call (PCAP)
- View the entire SIP call's journey
- Locate the issue, outage, and carrier
- Take carrier out of route with a click
- Send calls with no disruption

Other providers:

- Oh no! A bad call or outage!
- You file a ticket with a carrier
- Wait
- ABC Carrier says, "It's fixed!"
- Your business: 🤔

thinQ customers gain full control over call routes by running traffic through 40 carriers of their choice:

Your business — Calls
40+Carriers — thinQ

$
Lower costs
Total control
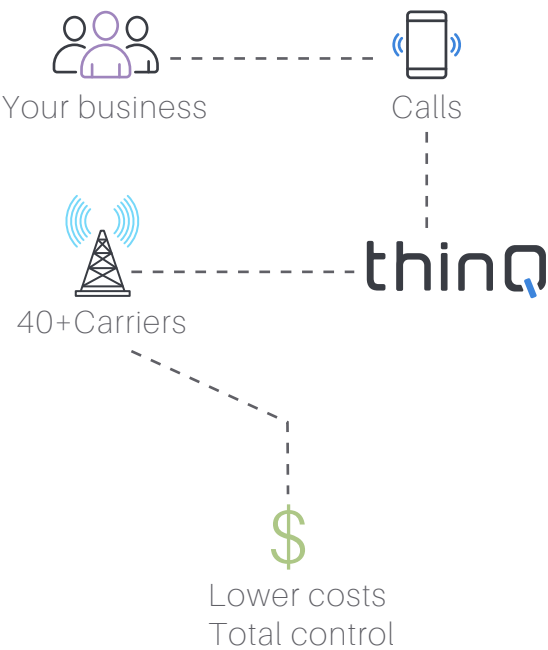

Other providers don't offer transparency into costs OR what happens en route:

Your business — Calls
ABC Carrier

$$$$
High costs
No control
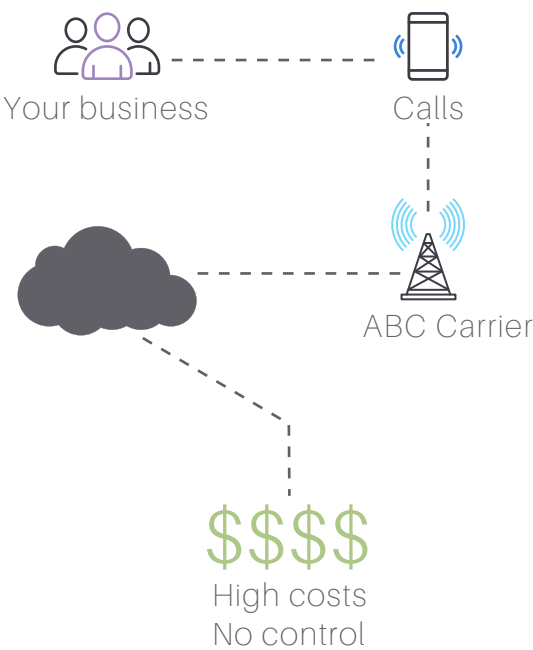

With thinQ, you get total control and redundancy for your calls. Scale your traffic at the lowest cost possible with access to 40+ high-quality carriers + world-class support.
