

The Cloud Evolution Continues... with CPaaS

The cloud has evolved continuously since its early beginnings. With each evolution, a corresponding paradigm shift occurs in business, enabling new business models and services within almost every industry. The latest evolution of the cloud is no different.

The demand for cloud business services is clear.

The cloud provides wide-ranging benefits to businesses.

\$278 billion will be spent on cloud services in 2022.

\$1.3 trillion in IT spending will be directly or indirectly affected by the shift to cloud by 2022.

96% of businesses currently use the cloud.

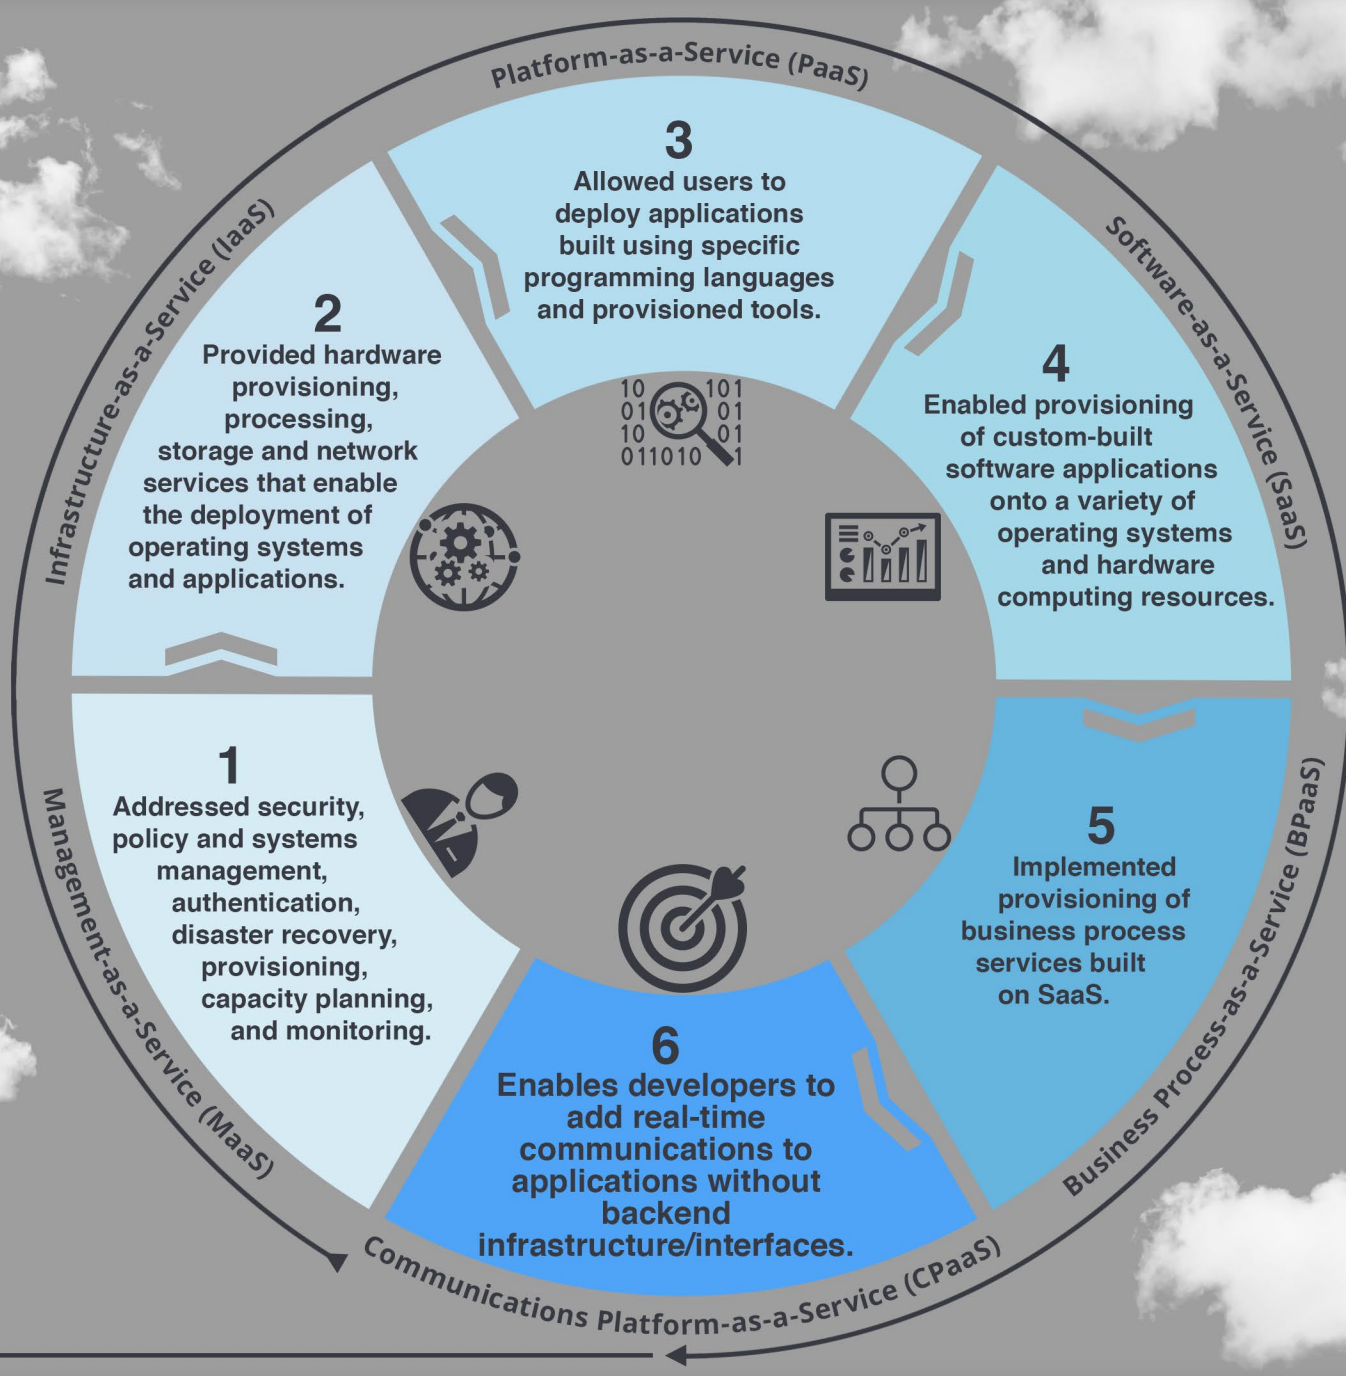

80% of businesses using the cloud increased productivity within 6 months.

82% of companies save money by integrating cloud solutions.

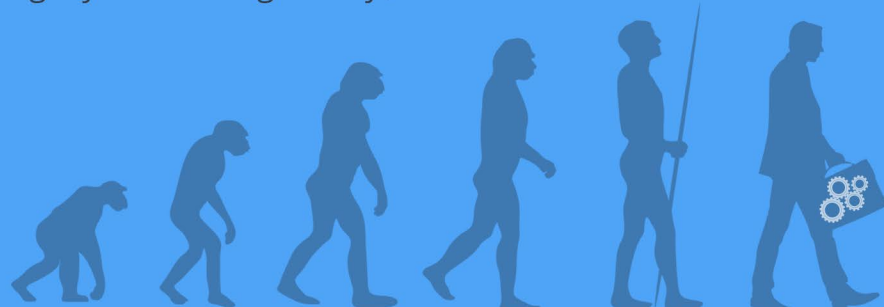

94% of SMBs have gained enhanced security since moving to the cloud.

The Next Evolutionary Step

CPaaS enables business innovation by integrating platforms, applications, infrastructure and knowledge processes into one solution. Key with CPaaS benefits to businesses include time and cost savings, and improved agility and manageability.

Time

CPaaS solutions deploy quickly and directly to customers.

Agility

CPaaS capabilities are extended by third party services.

Cost

CPaaS solutions are subscription-based and require no capital investment.

Manageability

CPaaS solutions are managed and monitored in real time.
