The Benefits of Microsoft Teams as Your UCaaS

UCaaS is a cloud-based service that improves communication and collaboration with integrated telephony, meeting functionality, messaging, software apps, APIs, and related services. Features can include voicemail, fax, call routing, call recording, and more, as well as integration with business applications like CRMs and ERP systems. Benefits include:

- Improved efficiency, productivity
- Better collaboration, regardless of location
- Enhanced customer service
- Less expensive, greater economies of scale
- Flexibility and mobility, optimizing remote/hybrid work and travel
- Cost efficiencies—less hardware, less systems to maintain
- Greater security and scalability

With so many benefits and so many people working remotely, it's no wonder companies are adding UCaaS—and no surprise so many choose Microsoft Teams. Since most organizations already have MS365, which includes Teams, it's the most cost-effective option. And people appreciate the advantages of a Microsoft application and the regular upgrades. The only downside? Microsoft is not a voice provider.

UniVoIP Makes it Easy to Add Voice

If collaboration is the goal, then voice is critical for truly unified communications. Over 90% of Teams users deploy a 3rd-party VoIP provider, but this can add cost and complexity. Fortunately, UniVoIP has already done the hard work for you! UniVoIP's voice calling plan is used natively within the Teams client and doesn't require any additional clients or plugins to enable users to communicate with the

outside world. As a result, you get an improved user experience at a lower cost (and you can toss those desktop phones in the trash!).

- Additional features such as analog, faxing, paging, SMS, and contact center
- Native MS Teams client voice calling via any device—be available, accessible, and manageable from anywhere
- Scalable, efficient, and cost-effective—purpose-built platform and dedicated network for MS Teams eliminates integration issues and limitations
- Easy, rapid activation and deployment—industry-first automated onboarding has you up and running in minutes
- Fully cloud-native solution—no need for 3rd-party add-ons, equipment, or plug-ins
- 24/7/365 U.S.-based support, free number porting

Powered by Commio

UniVoIP uses Commio to help you deliver the highest quality calls:

- Enjoy 99.99% up-time with 40+ carriers for reliable voice with maximum redundancy
- Intelligent call routing (ICR) ensures both the lowest cost and the highest quality calls—including smart toll-free
- Optimize your calling with real-time transparency and control
- Easy number management, with immediate access to thousands of numbers; and, move numbers between carriers quickly and easily
- 24/7/365 U.S.-based support

With Commio, you avoid unnecessary costs and complexity while eliminating the worry.
