

SMS/MMS FROM TELI BY COMMIO

Access the power of messaging

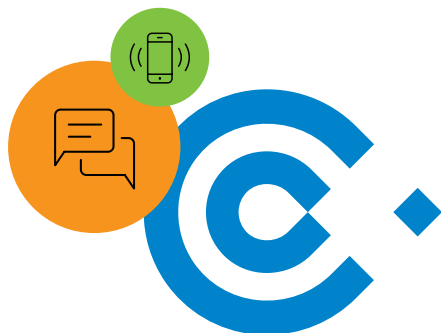

Smartphone users know texting is personal.

When your phone buzzes, you look. Chances are, you open it immediately—98% within the first three minutes. As a business, texting lets you engage with customers on a whole new level. In fact, most customers want that option for communicating with your business, and 20% say they prefer it over any other form. Yet it must be done correctly to maintain trust.

teli by Commio enables amazing, real-time customer experiences, with all supported messaging formats, an award-winning API to optimize your SaaS applications, direct-to-carrier pricing, and we make it easy:

- Worried about the details? We've been in the industry for over a decade; we understand the compliance rules, carrier requirements, acceptable use policies, and more.
- Minimize the possibility of delivery issues: We're directly paired with all major network gateways. And as a carrier, we ensure superior uptime and redundancy.
- Get help wherever you need it from our world-class, U.S.-based support team.
- Acquire new numbers fast through our award-winning customer portal and APIs, including toll-free blocks. We also support third party, hosted messaging.
- Enjoy the most competitive rates in the industry.

Whatever your texting needs, we can have you messaging in no time, ensuring customer satisfaction and peace of mind.

Short Code Messaging

Need large-scale throughput and capacity for alerts and notifications, SMS marketing campaigns, and Two-Factor Authentication (2FA) messages? Smaller is better: a five- or six-digit short code is best. Primarily one way/"FYI," short code recipients can still text you back.

- Need it delivered quickly? Originating from a central location, short code has minimal carrier filtering, and quickest delivery.
- Short codes can be hard to obtain, but we know what the carriers look for and will help you navigate.
- Get the fastest turnaround times to acquire codes. Approvals can take several months, but our expert input help ensure your application is air tight.

Toll Free SMS/MMS

When you have a message to share to a national audience, nothing beats toll-free. Use the same number across North America for all your messaging requirements, vs. numerous local numbers. And, give recipients the option of calling you back.

- Promote your products, services, and sales instantaneously.
- Send to a broader audience, from just one or a few numbers.
- Optimize your throughput vs. most 10DLC campaigns.
- Take advantage of easy procurement and lower costs vs. most short code messaging.

Text local: 10DLC Long Code

Better known as 10DLC or long codes, yesterday's local 10-digit phone numbers are today's application-to-person (A2P) messaging powerhouses, providing "local presence everywhere."

- Reach your customers where they live: we can help you send millions of messages to local numbers to power local customer experiences with faster delivery. 10DLC also allows call-backs.
- Text and pictures? Audio and video? Easy! Our numbers are SMS and MMS enabled.
- Reach everywhere using one of the largest local footprints in the U.S. at 95%.
- Need assistance registering your brand and campaigns? Register directly in the tel by Commio portal—we can even hold your hand.

Embed Messaging into Applications and Services

Building high-capacity voice, messaging, and fax functionality into your application is just a few short lines of code away.

Enable amazing, real-time customer experiences with tel Messaging API and platform by Commio.
